## Aware

Student assessment is complex and the logistics of creating and administering assessments are challenging. Aware is a system that was designed to manage and simplify this process. It's easy to build and administer assessments and analyze student progress with Aware.

### TEST DEVELOPMENT

Assessment results are only as good as the tests administered. Educators need a powerful workflow process to create, vet, and refine quality assessment items. By integrating locally constructed and third party items banks with a What-You-See-Is-What-You-Get Interface, Aware ensures the test construction process is intuitive yet powerful.

### TESTING, AN EXPERIENCE

Easily create district, school, team, and teacher assessments with instant access to results. Robust plain paper scanning, student friendly online testing, and third party devices can be used to collect student responses.

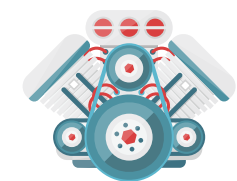

### VERSATILE INFORMATION

State test results, local test results, and imported assessments are analyzed and comparable in a unified, dynamic interface. Use custom monitor groups to create specific collections of students to empower decision-making.

### STUDENT MONITORING

Comprehensive student portfolios are populated with roster data, assessment results, and intervention documentation to paint the complete picture of a student's progress. District built students forms enable multiple different documentation pathways to converge. PGP's, Rtl forms, and Special Ed and 504 accommodations can all be presented in a student's portfolio.

### SUPER POWERED

Aware features a dynamic and intuitive data analysis engine that is designed around the inquisitive nature of educators. Custom reports allow educators to view and compare assessment data.
